

# Phoenix LiveView

Paul Valckenaers  
Bram Van Impe

# Phoenix installeren

- <https://www.phoenixframework.org/>
  - <https://elixir-lang.org/install.html>
- Install Phoenix project generator
  - `mix archive.install hex phx_new`
- Create your project
  - `mix phx.new <kies een naam> --no-ecto`
  - `cd <gekozen naam>`
  - `iex -S mix phx.server`
- Open web browser
  - <http://localhost:4000/>
- Open een code editor
  - `code .`

# router.ex

- .../lib/<gekozen\_naam\_web>
  - Endpoint.ex
  - **Router.ex** <<<
  - Telemetry.ex
- Localhost:4000/my\_page

# Live page – stap 1

```
scope "/", <GekozenNaamWeb> do  
  pipe_through :browser  
  get "/", PageController, :index  
  live "/my_page", MyPage  
end
```

# my\_page.ex

- .../lib/<gekozen\_naam\_web>/views
  - page\_view.ex
  - ...
  - **Zelf een module maken:**
    - my\_page.ex
- Localhost:4000/my\_page

# my\_page.ex – stap 2

```
defmodule Deel1Web.MyPage do
  use Phoenix.LiveView

  def mount(_params, _session, socket), do: { :ok, socket}

  def render(assigns) do
    ~H"""
    <h1> ----- Hello World ----- </h1>
    """
  end
end
```

# my\_page 1..6

- mount(params, session, socket)
- render(assigns)
  - <%= @var %>
  - <hml-parameter= {val} > ... </html-...>
- call back functions
- bindings

# my\_page 1..6

- mount(params, session, socket)
- render(assigns)
- call back functions
  - handle\_event(..., %{ “..” => var }, socket)
  - handle\_info({:key, info}, socket)
  - Socket.assigns.xxx
- Bindings: muis, toetsenbord, ...

# If ... else ...

```
<%= if @state == "new" do %>
```

```
  <p>Newly joined.</p>
```

```
<% end %>
```

```
<%= if @state == "new" do %>
```

```
  <p>Newly joined.</p>
```

```
<% else %>
```

```
  <p>Veteran.</p>
```

```
<% end %>
```

# Loop - Enum(erables)

```
def mount(_params, _session, socket) do
  {
    :ok,
    assign(socket, leden_lijst: ["Jef", Marie"])
  }
end
```

# Loop - Enum(erables)

```
